

The background of the entire page is a painting of red flowers, possibly hibiscus, with a shimmering, textured effect that gives it a sense of depth and movement. The flowers are in various stages of bloom, with some fully open and others as buds. The colors range from deep red to a lighter, almost pinkish-red. The texture is achieved through a combination of fine lines and a grainy, painterly style, with some areas appearing more saturated than others. The overall effect is one of vibrant energy and artistic craftsmanship.

Les Arêtes de poisson (maquette) 1965

Les Arêtes de poisson (maquette) (1965), translating to “fish bones,” is an elegant example from Alexander Calder’s career- and medium-spanning interest in the fish motif. The work’s central axis functions like a tapering spine, from which organic, fin-like planes fan outward. Calder incorporated fish imagery early in his career with the wire sculpture *Goldfish Bowl* (1929), his first mechanized sculpture; this motif became a through line in his practice, appearing in varied forms including carved wood and silver wire, and in mobiles and stabiles from intimate to monumental scale. The present work shares a title and similar articulated spine-like structure with an earlier mobile, *Fish Bones* (*Arêtes de poisson*) (1939), now in the collection of the Centre Georges Pompidou, Paris.

The last decade of Calder’s life was dedicated primarily to monumental sculptural commissions, and he produced maquettes as a means for experimentation. These maquettes offered both a conceptual and practical foundation, translating imaginative sketches into tangible models that guided the realization of his large-scale sculptures.

Richard Pousette-Dart

Ramapo Landscape 1983–85

Richard Pousette-Dart's *Ramapo Landscape* (1983–85) takes its title from the Ramapo Mountains, the densely forested stretch of the Appalachians forming the backdrop of the artist's studio in Rockland County, New York—a landscape that provided enduring spiritual and formal inspiration. “All art that is meaningful seems to be both of nature and abstraction inseparably interwoven,” Pousette-Dart once stated,¹ and *Ramapo Landscape* embodies that synthesis. Thousands of small, interwoven brushstrokes build distinctive, shimmering expanses of color, evocative of sunlight filtering through forested terrain and the optical fields of radiant color for which Pousette-Dart is known. These mosaic-like marks are accumulated using a technique the artist learned in his early work in photographic retouching, where he learned to build images through accumulations of dots.² Pousette-Dart returned to the Ramapo Mountains for inspiration repeatedly throughout his career, in works such as *Ramapo Sky* (1963; National Gallery of Art, Washington, D.C.), *Presence, Ramapo Mist* (1969; Whitney Museum of American Art, New York), and *Presence, Ramapo Horizon* (1975; The Metropolitan Museum of Art, New York).

Maquette for Plantoir 2001

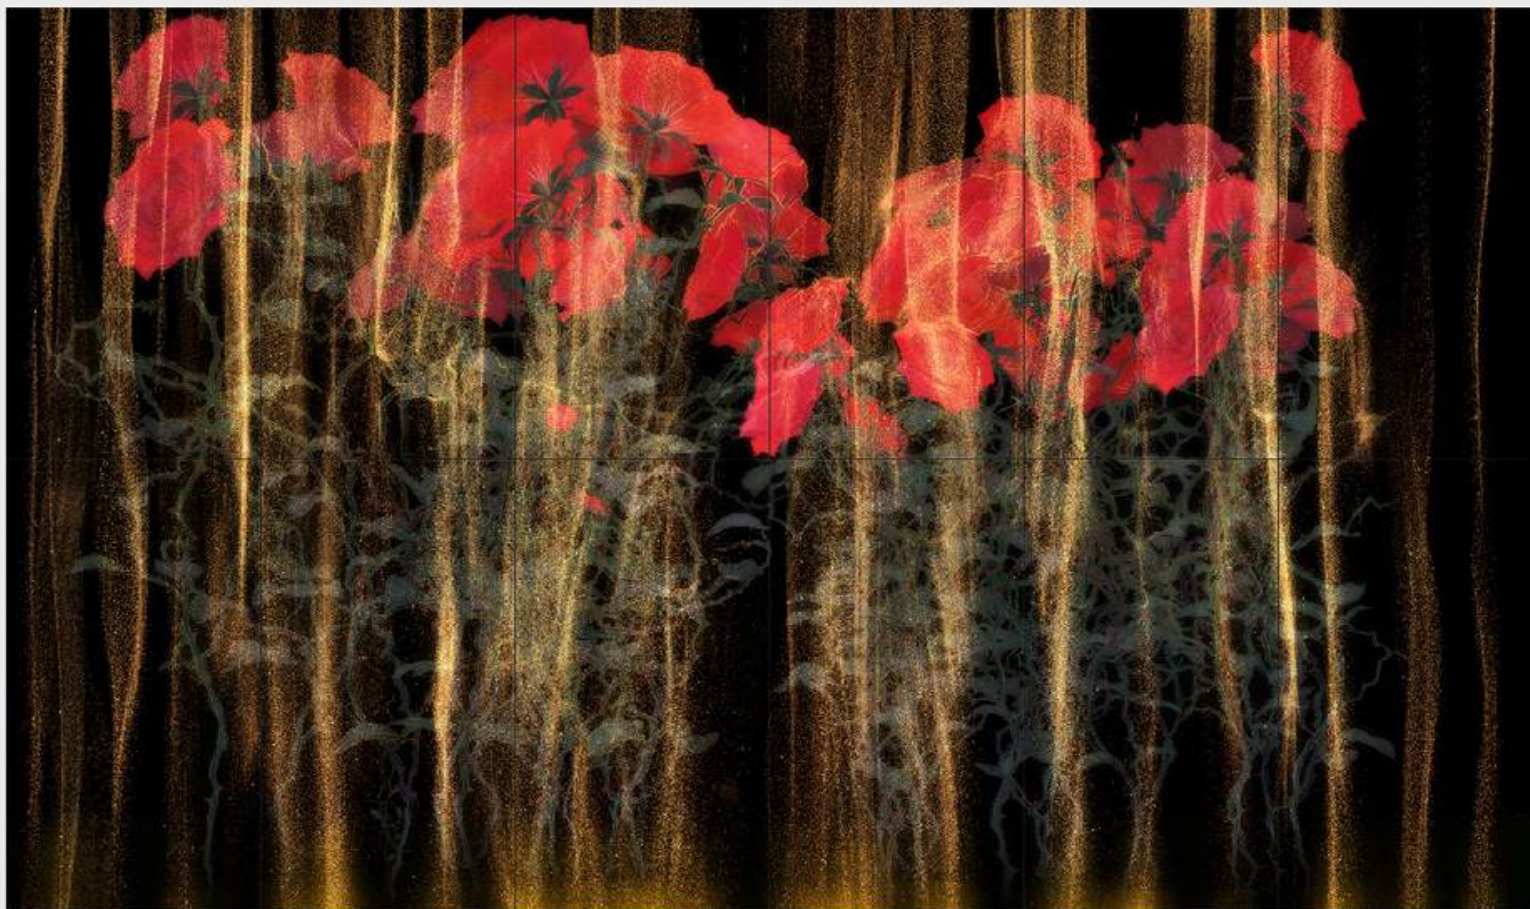

Fig. 1 Installation of *Plantoir* (2001) on the rooftop of The Metropolitan Museum of Art, New York (summer 2002).

Maquette for Plantoir (2001) is the intimate realization of the garden shovel concept that recurred across the span of Claes Oldenburg and Coosje van Bruggen's famed collaboration, and was also produced at mid- and monumental scale. Oldenburg and van Bruggen met in 1976 while the former was installing *Trowel I* (1971) at the Kröller-Müller Museum in Otterlo, the Netherlands, where van Bruggen had previously worked as an assistant curator; the work became their first collaboration when Oldenburg took van Bruggen's suggestion to replace the original silver finish of the sculpture with a bright blue. *Maquette for Plantoir* and the monumental *Plantoir* sculptures revisit the garden shovel motif a quarter century later, rendering the blade in a vivid red. The maquette offers a close-up view of the artists' playful manipulation of scale and form, embodying the humor and creativity central to their collaboration. A twenty-four-foot-tall edition of *Plantoir* (2001) was installed on the rooftop of The Metropolitan Museum of Art, New York for the duration of summer 2002. [fig. 1] Permanent installations of the full-scale *Plantoir* in red are found at the Frederik Meijer Gardens & Sculpture Park, Grand Rapids, Michigan, and the Fundação de Serralves, Porto, Portugal. Full-scale *Plantoir* sculptures in blue are in the permanent collections of the Qatar Museums, Doha, and the University of Texas Southwestern Medical Center, Dallas.

Persistence of Life in the Sandfall 2024

Persistence of Life in the Sandfall (2024) is a monumental twelve-screen installation from teamLab that examines two temporal motifs: falling sand as a measure of fleeting time, and the life cycle of flowers as an index of seasonal change. Referring to the English idiom “the sands of time,” hypnotic falling sand recalls an hourglass, a tool to measure short intervals of time, while the sand itself—formed through the slow erosion of rock over millennia—embodies the vast, geological scale of time. The looping life cycle of the flowers in this work—a motif that recurs across teamLab’s installations—introduces another measure of time, marking the changing of seasons and the continual cycle of growth and decay. The work responds directly to viewers: touching the sand interrupts its flow, while touching the flowers causes them to scatter and fade, making the passage of time both visible and immediate. The work is realized through teamLab’s concept of Ultrasubjective Space, a spatial philosophy that liberates the body from fixed perspective. The boundary between the world of the work and the physical environment is dissolved, allowing the viewer and the space they occupy to become an extension of the artwork. Accompanied by Hideaki Takahashi’s sound design, *Persistence of Life in the Sandfall* will feature in the atrium at Abu Dhabi Art in a special presentation.

Maracutola 2015

Beatriz Milhazes's *Maracutola* (2015) unfolds in layered, kaleidoscopic forms, underpinned by the precise structural principles that guide her oeuvre. This work was first shown in *Marola*, the artist's 2015 solo exhibition at James Cohan Gallery, New York. The exhibition title—Portuguese for “ripple”—refers to the visual metaphor of undulating waves throughout works in the exhibition, exemplified here in the rhythmic, wave-like patterns created with the artist's signature concentric circles. The layered forms in *Maracutola* are a result of her hallmark monotransfer technique, developed in 1989, in which she paints directly onto rigid sheets of plastic before imprinting the imagery onto canvas, constructing layered compositions with a characteristically smooth surface. This collage of swirling, mosaic-like shapes form the visual vocabulary the artist has termed “chromatic free geometry.” Milhazes's “triangle of references” draws upon Henri Matisse, Piet Mondrian, and Tarsila do Amaral, one of the leading figures of Brazilian Modernism, along with more contemporary twentieth-century Brazilian artists Lygia Clark and Ubi Bava,¹ and the Swedish artist Hilma af Klint, together informing her vibrant compositions built from dynamic lines, architectural and organic shapes, and rigorously balanced spatial arrangements.
